

Arun International

For Reliable Power

POWER STATIONS

5MW TO 100MW

Arun International (Power) Ltd is structured to provide **real power solutions** that satisfy customer needs by providing the best **value package** available, operating on **distillate, heavy fuel oil or crude oil**.

The company is structured to provide total systems solutions through **standardisation and modularization**.

A range of industrial base load designed generation equipment powered by the **worlds leading prime movers** is used to ensure the total integrity of the plant.

Modern project management services are employed to ensure that the customer expectations are met.

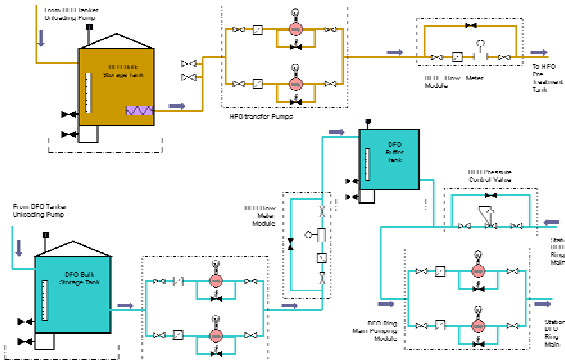

Some of the Features and Benefits

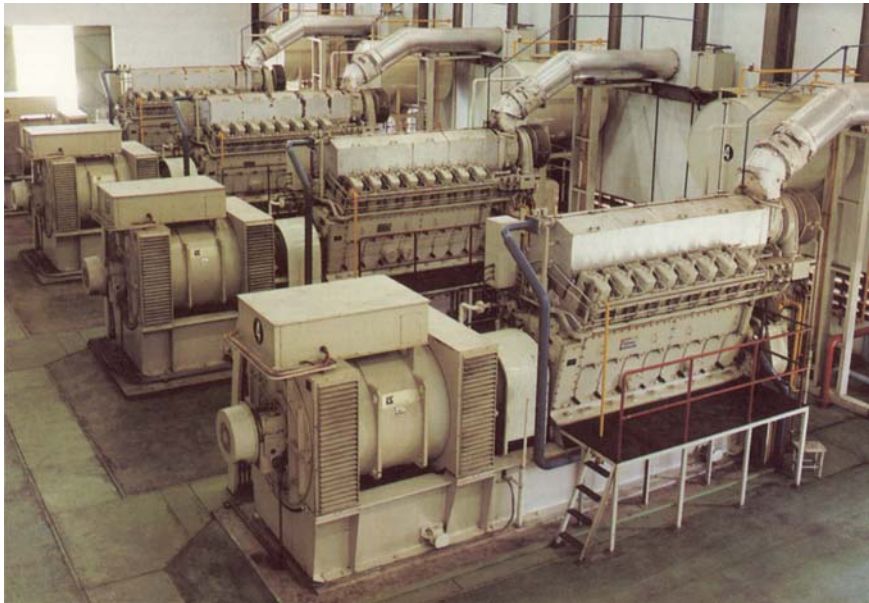

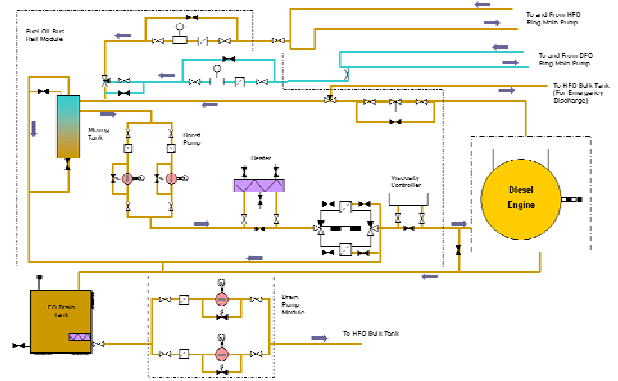

- **Low Capital Expenditure** Simple maintenance, modern systems management, modular design for reduced installation costs
- **High Reliability** High quality component selection, advance design technology reducing wear of critical components
- **Longevity** Extensive applications experience, user-friendly design consideration, tried and proven maintenance regimes
- **High Availability** Increased periods between services, reduced maintenance downtimes, remote monitoring
- **Low Operating Costs** Fewer components, low maintenance costs, flexibility of fuels with low consumption, remote condition monitoring capability
- **Environmentally Friendly** Advanced fuel technology for exhaust gas emission control, -waste management of fuels and oils, modular plant designs for control of leakage and drainage, sludge treatment systems.
